

Internet Domain Registration Is A Simple Process

The process of Internet domain registration is surprisingly easy. Anyone with access to the Internet can register one or several domain names. Boiled down to the simplest terms, one needs to select a domain registrar, choose a domain name, enter the required registration information, and provide payment, as required by the registrar. However, if one is not familiar with these terms or the basic management of Internet domain registration it may not seem so straightforward. In fact, it can be intimidating. Registrar, domain, domain name...what exactly does it mean? Fortunately, all this can be put into perspective.

The term domain refers to the actual website. The domain name is the address that allows people to access the site. A website that has been accredited as a domain registrar will manage your Internet domain registration, collecting the necessary information, sending it to a central directory, and maintaining your registration records. You have a broad choice of sites which function as domain registrars. Some, called Web hosts, will also assist you with creating and managing your website once you have completed your Internet domain registration. Using a Web host for Internet domain registration may be a more comfortable option for those with limited technical knowledge.

The hardest part of completing an Internet domain registration may be finding an available domain name. The Internet domain name has a defined layout and must be one of a kind. Following the standard www the domain name consists of a name, then what is known as an extension. Today there are many extensions to choose from, but you are probably most familiar with .com or .net. For instance, www.myname.net is a sample domain name format. It is wise to choose a name that indicates the nature of your website. The combination of the name and extension cannot be registered by anyone else. ICANN is the corporation which sees to the integrity of Internet domain registration. Access to the information stored from the Internet domain registration process is available on the InterNIC website. The registry itself is WHOIS.

Fortunately, most Internet domain registrars provide a search to determine availability of the name you want. If your choice is not available, the search may provide alternate names, which you can select. You can also continue to search until you find one that is just right. Now you are on your way. Fill out the required information and file. Done! Your Internet domain registration is complete and your registrar will alert you when it is ready to use.
