

How To Apply Car Wax

Car Wax acts as a coating on the car exterior and helps in preventing oxidation and protects the paint from getting faded. Car wax greatly contributes in increasing the life of a cars paint finish and makes the exterior of the car look enhanced. Car Wax also helps in concealing any marks that may be present on the surface. However, these marks would reappear when the wax is worn off.

Waxing the car regularly may require some hard work and time, but you get to shield your cars paint form environmental conditions and damages caused by sunlight and other environmental factors. There are many people who believe that applying car wax to the surface once is enough and it would provide protection for a long time. It is quite contrary because the wax needs to be applied on months intervals.

Choosing the right kind of wax for your car is very important to assure the shine for your car. You should choose a wax that does not contain abrasives. The cars paint can be hazed and there can be scratches left on the surface if the wax contains abrasives.

Carnauba Wax is believed to be of good quality by many people. Carnauba Wax is more expensive but is better than the others because of its ability to stick and being easier to buff. Even if the quality of the Car Wax is good, it still requires hard work while applying. Before applying the Car Wax, it is recommended to read the instructions on the package. Instead of applying the Car wax on the entire surface at once, it should be first tested on a patch.

The car should be parked in a place that is not getting the direct sunlight. Surfaces that are cool are better for applying the Car Wax. During applying Car Wax, you should work on one section of the car at a time and then proceed to the other.

Before applying the Car Wax, the car should be thoroughly washed and dried. The Car Wax which is difficult to apply is considered to be more effective. This is due to the reason that the [car waxes](#) which are difficult to apply are effective for a shorter period of time.

You should use a Wax sponge for applying the Car Wax. Use circular motions during the application of the Wax and you should take care that the wax doesnt get into seams and jambs. If this happens, a toothbrush can be used for removing it. The Car Wax can be wiped off with the help of a towel. The Car Wax should not be left for more than 2 hours because it would be difficult to remove. Related [Best car wax](#) | [Car](#) | [Car](#) |
